## WINDIGI –Lite and Lite Plus PROMPTING SOFTWARE FOR WINDOWS 98, 2000, ME, NT AND XP®

WinDigi Lite and Lite Plus are cut down versions of our powerful WinDigi prompting software package for Windows. They have been introduced to suit the requirements of smaller operations that do not require the power of the full version of WinDigi.

No special graphics card is required as the software uses the standard video card supplied with your PC. True Type® fonts are scaled giving large easy-to-read characters which are smoothly scrolled with a controller. The WinDigi range of products have been developed by Portaprompt who have over twenty five years of experience in the field of prompting sales and hire. The Editor uses Rich Text Format making it compatible with all the world's favourite word processors. The text can be formatted and styled, for example by using underlining, bold, italics, colour, centring, indenting, justification and bullet points, making the WinDigi range the most powerful yet affordable prompter Portaprompt have developed to date.

Scroll wheel

The only real difference between WinDigi Lite and WinDigi Lite Plus is the device that controls the speed of the scrolling text.

To the left is a suitable mouse fitted with a scroll wheel which is required to control the speed of the text with WinDigi Lite.

Below are the control options for WinDigi Lite Plus.

The hand control is rugged and reliable and simple to use.

The foot control is also a tough customer designed to be left under a desk with little maintenance.
